## Contents

1	Reference Material		
	1.1 Table of Units		
	1.2 Table of Symbols		
2 Specific System Description			
	2.1 Solution Characteristics Specification		
	2.1.1 Data Definitions		

#### 1 Reference Material

This section records information for easy reference.

#### 1.1 Table of Units

The unit system used throughout is SI (Système International d'Unités). In addition to the basic units, several derived units are also used. For each unit, Tab:ToU lists the symbol, a description and the SI name.

Symbol	Description	SI Name
$^{\circ}\mathrm{C}$	temperature	centigrade
m	length	metre
W	power	watt

Table 1: Table of Units

#### 1.2 Table of Symbols

The symbols used in this document are summarized in Tab:ToS along with their units. The choice of symbols was made to be consistent with the nuclear physics literature and with that used in the FP manual.

Symbol	Description	Units
$h_{ m b}$	Initial coolant film conductance	_
$h_{ m c}$	Convective heat transfer coefficient between clad and coolant	$\frac{W}{m^2 {}^{\circ}C}$
$h_{ m g}$	Effective heat transfer coefficient between clad and fuel surface	$\frac{W}{m^2 {}^{\circ}C}$
$h_{ m p}$	Initial gap film conductance	_
$k_{ m c}$	Clad conductivity	_
$ au_{ m c}$	Clad thickness	_

Table 2: Table of Symbols

### 2 Specific System Description

This section first presents the problem description, which gives a high-level view of the problem to be solved. This is followed by the solution characteristics specification, which presents the assumptions, theories, and definitions that are used.

### 2.1 Solution Characteristics Specification

The instance models that govern HGHC are presented in Sec:Instance Models. The information to understand the meaning of the instance models and their derivation is also presented, so that the instance models can be verified.

#### 2.1.1 Data Definitions

This section collects and defines all the data needed to build the instance models.

Refname	DD:htTransCladFuel
Label	Effective heat transfer coefficient between clad and fuel surface
Symbol	$h_{ m g}$
Units	$rac{ m W}{ m m^{2\circ}C}$
Equation	$h_{ m g} = rac{2k_{ m c}h_{ m p}}{2k_{ m c}+ au_{ m c}h_{ m p}}$
Description	$h_{\rm g}$ is the effective heat transfer coefficient between clad and fuel surface $(\frac{\rm W}{\rm m^{2}{}^{\circ}{\rm C}})$ $k_{\rm c}$ is the clad conductivity (Unitless) $h_{\rm p}$ is the initial gap film conductance (Unitless) $ au_{\rm c}$ is the clad thickness (Unitless)

Refname	DD:htTransCladCool
Label	Convective heat transfer coefficient between clad and coolant
Symbol	$h_{ m c}$
Units	$rac{ m W}{ m m^{2\circ}C}$
Equation	$h_{\mathrm{c}} = rac{2k_{\mathrm{c}}h_{\mathrm{b}}}{2k_{\mathrm{c}} +  au_{\mathrm{c}}h_{\mathrm{b}}}$
Description	$h_{\rm c}$ is the convective heat transfer coefficient between clad and coolant $\left(\frac{\rm W}{\rm m^{2\circ}C}\right)$ $k_{\rm c}$ is the clad conductivity (Unitless) $h_{\rm b}$ is the initial coolant film conductance (Unitless) $ au_{\rm c}$ is the clad thickness (Unitless)
