### **Background Context**

- ullet  $\exists$  problems  $\in$  D where
- $D = \{ \text{ scientific computing, engineering computing } \}$
- Problems = [
  - Inconsistent Software Requirement Specifications (SRS) across
    D
  - Inconsistency between code and documentation
  - Documentation is annoying to make and maintain
  - Hard to reuse code for different applications

### Purpose of Drasil

- Solve the four issues
- Promote
  - Reusability
    - Examples have fully documented code
    - Data base to build new examples
  - Maintainability
    - Make changes in one place, gets updated everywhere

### What is Drasil?

• Knowledge Capture (Data.Drasil)

### What is Drasil?

- Knowledge Capture (Data.Drasil)
- Language and Rendering (Language.Drasil)
  - Code Generation: transition from Drasil to working code
  - Documentation Generation: transition from Drasil to human readable documentation

- Case Studies (Example.Drasil)
  - This part is where you would input equations, requirements, and output code and documentation

- Git allows us to collaborate effectively, even when team members are not in the same location
- Git combined with haskell, allows us to make large changes while easily maintaining a working version of Drasil
